 # 4th May 2015-Current:

Tech Lead in Dreamztech Solutions Pvt. Ltd., Kolkata

Grew up the ranks from software developer to team lead to lead multiple project deliverables for DreamzTech across multiple geographies for multiple clients. My job entails me to liaise and engage with clients to define the functional and technical scope, create detailed high-level and low-level design documents for client sign-off, and then lead the project deliverables with a team of experienced developers. As part of this job role, I need to also develop detailed user stories on Jira and manage the holistic project management aspect for my company.

Achievements:

- ✦ *Newcomer of the year 2016 at Dreamztech Solutions*
- ✦ *Awarded "Live Wire Award as Certificate of Excellence" at Dreamztech Solutions in 2018*

Academics:

Bachelor of Commerce (Accountancy Hons) in the year 2008
Higher Secondary with Science in the year 2005

Projects:

Custom blogging platform with PWA for a famous public figure in South Africa:
  # **Environment:** Web API, Angular
  # **Role:** Backend Developer
  # **Description:** Our client was a famous public figure in South Africa. The Goal of the application was to create a platform where our client can upload various events, integration with Instagram account, and letting fans to comment and interact about those events.

Online/Offline Survey Portal for an organisation in USA:
  # **Environment:** Web Api, Angular, SQL Server
  # **Role:** Backend Developer
  # **Description:** Our client maintains survey of land properties in remote locations through inspection officers. Internet might not be available in such locations, and hence the requirement was to temporarily save the info in a PWA application and then sync the data once internet is available.

Video Centric Recruitment system for a recruitment company in USA:
  # **Environment:** Angular, Web Api, SQL Server
  # **Role:** Developer
  # **Description:** This platform is a candidate centric video enabled recruitment platform, designed to give candidates a creative voice and a new avenue for career advancement, and employers a better way to attract top talent.

Construction Management Application for a start-up in USA:
   # Environment: Angular (PWA), Web Api
   # Role: Client Management, Team Lead
   # Description: This was an application developed mostly for the construction companies to keep track of their blueprints, construction materials and so on. Users had to pay for this on a subscription basis through Stripe.

Internal Management System for a leading High-tech Company in UK:
   # Environment: Web Api, Angular JS, SQL Server
   # Role: Client Management, Lead Developer, Technical Lead, Team Lead
   # Description: Our client operates the one of the most secure and compliant data centre in the UK to deliver remote monitoring and management of security solutions that will ensure continuous protection of people, property, information, and physical assets. Our task was to provide them with multiple portals to maintain their jobs in a seamless and easy manner. Some of those Portals were:

i. An E-Learning System where clients can study and get certified to use any specific device,
ii. A portal to assign service providers their tasks, and manage those
iii. Portal for administrators to monitor status of their devices with their current geolocations and so on.

Document Management System for a start-up in India:
   # Environment: Angular.js (Angular 1), Node JS (Express), Mongo DB
   # Role: Junior Developer
   # Description: This was a platform developed where a subscribed user can upload and manage all their documents, which are interconnected with Google Drive, and Google Calendar. Subscriptions and payments are managed through Stripe. Users can add other users into custom events, and send notifications to them for the same. Also, such events get added in their Google calendar automatically as a part of synchronisation. Invited users can have the same event in their calendar if they confirm that they are taking part in the same event. Such event calendars can be exported and imported in other calendar platforms as well.

Learning Management System for a renowned Logistics Company in UAE
   # Environment: Laravel, React Native
   # Role: Client Management, Technical Lead
   # Description: Developing a complete e-learning platform where internal users of the company can learn varied topics under new programmes, opt for examinations, and finally download certificates. Courses, Lessons, Tutorials, and examinations can be created by Trainers, and those programmes can be assigned to employees by managers.

E-Commerce PWA Platform for a start-up in USA:
   # Environment: Laravel, jQuery, React.js (PWA), MySQL
   # Role: Client Management, Technical Lead
   # Description: The platform was a multivendor shopping website in USA. Users can buy or sell products or services through a secured payment platform, after providing a small fee to the main business.

Service Based E-Commerce Platform for a start-up in USA:
   # Environment: Cake Php
   # Role: Junior Developer
   # Description: It's a London-based team of enthusiastic professionals that provide personalised massage therapies, and yoga sessions. They needed an application where bookings can be made online based on professional's availability, and current subscription status.

Online Advertise Platform with MLM Functionality for an Advertisement Agency in USA:
   # Environment: Core Php, MySQL
   # Role: Project Manager, Tech Lead, Lead Developer
   # Description: Our client holds an advertisement agency and needed a platform where users can pay certain amount of money to open accounts and post advertisements for a huge array of audience. It has a MLM structure as well where users get paid for their referrals, and they even get commission when the referred person refers another user.

Interests/ Hobbies:

✦ Reading articles on New Technology Directions & Paradigms, Mobile Photography and Traveling
✦ Mentoring colleagues and young newcomers.
